H-05

A case report of severe chronic periodontitis with an adult bronchial asthma

Eri Otsuka \*

Nadyapark dental clinic

修正後)

*Case:* There were class II mobility in #37/#18 and furcation involvement in #16/#3, #17/#2, #26/#14, #27/#15, #37/#18, #46/#30, #47/#31.

*Clinical Procedures and Outcomes:* the number of periodontal pathogenic bacteria had decreased and supportive periodontal therapy was started. Although the patient had an adult bronchial asthma from 2009

*Conclusion:* This case indicates adult bronchial asthma could be relieved by periodontal treatment with antibiotics.
